The Chemistry of Heterocyclic Compounds

Introduction to the Series

The chemistry of heterocyclic compounds is one of the most complex and intriguing branches of organic chemistry, of equal interest for its theoretical implications, for the diversity of its synthetic procedures, and for the physiological and industrial significance of heterocycles.

The Chemistry of Heterocyclic Compounds, published since 1950 under the initial editorship of Arnold Weissberger, and later, until Dr. Weissberger's death in 1984, under our joint editorship, has attempted to make the extraordinarily complex and diverse field of heterocyclic chemistry as organized and readily accessible as possible. Each volume has traditionally dealt with syntheses, reactions, properties, structure, physical chemistry, and utility of compounds belonging to a specific ring system or class (e.g., pyridines, thiophenes, pyrimidines, three-membered ring systems). This series has become the basic reference collection for information on heterocyclic compounds.

Many broader aspects of heterocyclic chemistry are recognized as disciplines of general significance that impinge on almost all aspects of modern organic chemistry, medicinal chemistry, and biochemistry, and for this reason we initiated several years ago a parallel series entitled *General Heterocyclic Chemistry*, which treated such topics as nuclear magnetic resonance, mass spectra, and photochemistry of heterocyclic compounds, the utility of heterocycles in organic synthesis, and the synthesis of heterocycles by means of 1,3-dipolar cycloaddition reactions. These volumes were intended to be of interest to all organic, medicinal, and biochemically-oriented chemists, as well as to those whose particular concern is heterocyclic chemistry. It has, however, become increasingly clear that the above distinction between the two series was unnecessary and somewhat confusing, and we have therefore elected to discontinue *General Heterocyclic Chemistry* and to publish all forthcoming volumes in this general area in *The Chemistry of Heterocyclic Compounds* series.

This series, together with the international community of chemists concerned with heterocyclic chemistry, is indebted once again to the indefatigable efforts of Dr. D. J. Brown. His record of authoring classics in nitrogen heterocyclic chemistry (*The Pyrimidines*, *The Pyrimidines Supplement I*, *The Pyrimidines Supplement II*, *Pteridines*) is now extended by the publication of an exhaustive supplement to Wilf Armarego's initial volume on *Quinazolines*. We extend once again our congratulations and our thanks to Dr. Brown for a further outstanding contribution to the literature of heterocyclic chemistry.

EDWARD C. TAYLOR

Preface

Dr. Wilf Armarego's original volume, *Quinazolines*, appeared within this series in 1967. Not only did it represent an excellent summary of quinazoline chemistry to the end of 1965, but it clearly facilitated and stimulated considerable subsequent research in the field. Thus the need for a supplementary volume covering the last 30 years' literature has become pressing. On account of a radical change in his research interests during that period, Dr. Armarego felt disinclined to undertake such an updating task, which consequently fell to the present author, whose interests have remained broadly within this area.

Because of a great expansion in the scope of quinazoline chemistry and for other pragmatic reasons, it has been necessary to inaugurate a massive chapter on primary syntheses and to reorganize completely the content of remaining chapters so that they might better reflect and emphasize current research trends. However, the status of the present volume as a *supplement* has been maintained by sectional cross-references (e.g., H 42) to pages of the original volume (*Hauptwerk*) where earlier relevant information may be found. Moreover, in view of the vast increase in the number and types of individual quinazolines described in recent literature, it has been necessary to abandon the myriad classified tables of known quinazolines in favor of a single alphabetical table of simple quinazolines. To facilitate recovery of any earlier data from tables in the original volume, a cross-reference (e.g., H 151) has been added (when appropriate) to each individual entry in the new table. The opportunity has been taken to bring the chemical nomenclature into line with current IUPAC recommendations [*Nomenclature of Organic Chemistry, Sections A–F, H* (Eds. J. Rigaudy and S. P. Klesney, Pergamon Press, Oxford, 1970)] with one important exception: in order to keep "quinazoline" as the principal part of each name, those groups that would normally qualify as principal suffixes, but that are not attached directly to the nucleus, are rendered as prefixes. For example, 2-carboxymethyl-4(3*H*)-quinazolinone is used instead of α -(4-oxo-3,4-dihydro-2-quinazolinyl)acetic acid. Secondary or tertiary amino groups are rendered invariably as prefixes. Trivial names, still occasionally used for some naturally occurring oxyquinazolines, are included as appropriate in the table of simple quinazolines and/or in Section 4.8.4. Finally, to avoid repetition and inevitable confusion, literature references are presented as a single list rather than as smaller lists at the end of each chapter.

In preparing this *supplement*, the massive patent literature has been ignored in the belief that useful factual material therein has appeared subsequently in the regular literature. It must be mentioned also that a small but significant proportion of the research papers quoted as references have proved very disappointing in terms of essential detail, thereby reflecting badly on their authors and on the editorial policies of the journals in which they appeared. The

popularity of quinazoline research in India and Egypt is both noteworthy and rather puzzling.

Although the original papers on quinazoline chemistry during the last 30 years came from no less than 55 countries, they appeared in only 16 languages (ignoring any subsequent translations): from the following percentages, it is evident that the laudable trend toward publication of research results in a widely understood major language has continued.

English	75.9%
German	11.0%
Russian	5.9%
French	2.3%
Japanese	1.4%
Italian	1.1%
Romanian	0.6%
Polish	0.4%
Ukrainian	0.4%
Spanish	0.2%
Bulgarian	0.2%
Chinese	0.2%
Hungarian	0.1%
Czech	0.1%
Korean	0.1%
Portugese	<0.1%
Slovenian	<0.1%

I am greatly indebted to my former colleagues, Drs W. L. F. Armarego and G. B. Barlin, for invaluable discussions; to successive Deans of the Research School of Chemistry (Professors A. L. G. Beckwith, L. N. Mander, and J. W. White) for the provision of excellent postretirement accommodation and facilities within the School; to Dr. Adam Vincze (Israel Institute for Biological Research) for kind advice; to the branch librarian, Mrs J. Smith, for unfailing cooperation; and to my wife, Jan, for her cheerful forbearance and unstinting assistance during indexing, proofreading, and the like.

Contents

CHAPTER 1. PRIMARY SYNTHESSES	1
1.1 From a Single Benzene Substrate	1
1.1.1 By Formation of the 1,2-Bond	1
1.1.2 By Formation of the 1,8a-Bond	5
1.1.3 By Formation of the 2,3-Bond	5
1.1.3.1 From <i>o</i> -Acylaminobenzamides	5
1.1.3.2 From <i>o</i> -Acylaminobenzamide Oximes	9
1.1.3.3 From <i>o</i> -(Alkoxy-carbonylamino)-benzamides	10
1.1.3.4 From <i>o</i> -Ureidobenzamides	11
1.1.3.5 From <i>o</i> -(Benzylideneamino)benzamides	13
1.1.3.6 From <i>o</i> -Acylaminobenzonitriles	13
1.1.3.7 From <i>o</i> -(Substituted Methylene-amino)benzonitriles	15
1.1.3.8 From <i>o</i> -(Acylamino)benzaldehyde Hydrazones and Related Substrates	16
1.1.3.9 From Miscellaneous Substrates	17
1.1.4 By Formation of the 3,4-Bond	18
1.1.4.1 From <i>o</i> -Ureidobenzoic Acids	18
1.1.4.2 From <i>o</i> -Ureidobenzoic Esters	20
1.1.4.3 From <i>o</i> -Ureidobenzoyl Chlorides or <i>o</i> -Ureidobenzamides	21
1.1.4.4 From <i>o</i> -Ureidobenzonitriles	21
1.1.4.5 From <i>o</i> -Ureidobenzaldehyde Derivatives and Related Substrates	22
1.1.4.6 From <i>o</i> -(Aminomethyleneamino)-benzoic Acids, Esters, or Amides	24
1.1.4.7 From Miscellaneous Substrates	25
1.1.5 By Formation of the 4,4a-Bond	27
1.2 From a Benzene Substrate and Ancillary Synthon(s)	31
1.2.1 Where the Synthon Supplies N1	31
1.2.2 Where the Synthon Supplies C2	31

1.2.2.1	The Use of Carboxylic Acids and Related Synthons	31
1.2.2.2	The Use of Carbonic Acid-Derived Synthons	44
1.2.3	Where the Synthon Supplies N3	49
1.2.3.1	With <i>o</i> -Acylaminobenzoic Acids as Substrates	49
1.2.3.2	With <i>o</i> -Acylaminobenzoic Esters as Substrates	50
1.2.3.3	With <i>o</i> -Acylaminobenzonitriles as Substrates	52
1.2.3.4	With <i>o</i> -Acylaminobenzaldehydes or Related Ketones as Substrates	52
1.2.3.5	With <i>o</i> -(Alkoxycarbonylamino)-benzoic Esters or Related Ketones as Substrates	53
1.2.3.6	With <i>o</i> -(Substituted Methylene-amino)benzoic Esters or Related Ketones as Substrates	55
1.2.3.7	With <i>o</i> -(Substituted Methylene-amino)benzonitriles as Substrates	56
1.2.3.8	With <i>o</i> -Isocyanatobenzoyl Chlorides as Substrates	58
1.2.3.9	With <i>o</i> -Isocyanatobenzoic Esters and Related Ketones or Nitriles as Substrates	58
1.2.3.10	With <i>o</i> -Cyanoamino- or <i>o</i> -Ureido-benzoic Esters and Related Ketones or Nitriles as Substrates	60
1.2.3.11	With Miscellaneous Substrates	61
1.2.4	Where the Synthon Supplies C4	62
1.2.5	Where the Synthon(s) Supply N1 + C2	64
1.2.6	Where the Synthon(s) Supply C2 + N3	66
1.2.6.1	With <i>o</i> -Aminobenzoic Acids as Substrates	66
1.2.6.2	With <i>o</i> -Aminobenzoic Esters as Substrates	73
1.2.6.3	With <i>o</i> -Aminobenzamides as Substrates	78
1.2.6.4	With <i>o</i> -Aminobenzonitriles as Substrates	80

1.2.6.5	With <i>o</i> -Aminobenzaldehydes or Related Ketones as Substrates	83
1.2.6.6	With Miscellaneous <i>o</i> -Disubstituted Benzenes as Substrates	87
1.2.7	Where the Synthon(s) Supply N3 + C4	88
1.2.7.1	With <i>N</i> -Acylanilines as Substrates	88
1.2.7.2	With <i>N</i> -(α -Chloromethylene)anilines or Related Compounds as Substrates	90
1.2.7.3	With Other Aniline Derivatives as Substrates	91
1.2.8	Where the Synthon(s) Supply N1 + C2 + N3	92
1.2.8.1	With <i>o</i> -Halogeno or <i>o</i> -Alkoxybenzonitriles as Substrates	92
1.2.8.2	With <i>o</i> -Substituted Benzoic Esters or Related Compounds as Substrates	93
1.2.8.3	With <i>o</i> -Substituted Acetophenones or Related Compounds as Substrates	94
1.2.8.4	With 2-Methylenecyclohexanones as Substrates	95
1.2.8.5	With Miscellaneous Substrates	96
1.2.9	Where the Synthon(s) Supply C2 + N3 + C4	97
1.2.10	Where the Synthon(s) Supply N1 + C2 + N3 + C4	100
1.3	From a Single Pyrimidine Substrate	103
1.4	From a Pyrimidine Substrate and Ancillary Synthon(s)	104
1.5	From a Heteromonocyclic Substrate Other than a Pyrimidine	107
1.5.1	Imidazoles as Substrates	108
1.5.2	1,3,5-Oxadiazines as Substrates	108
1.5.3	1,2,4-Oxadiazoles as Substrates	108
1.5.4	1,3,4-Oxadiazoles as Substrates	109
1.5.5	1,2,3,5-Oxathiadiazines as Substrates	109
1.5.6	Oxazoles as Substrates	110
1.5.7	1,2,4,5-Tetrazines as Substrates	110
1.5.8	1,2,3,4-Thiatriazoles as Substrates	111
1.6	From a Heterobicyclic Substrate	111
1.6.1	Benzazetines as Substrates	111

1.6.2	2,1-Benzisothiazoles as Substrates	112
1.6.3	2,1-Benzisoxazoles as Substrates	112
1.6.4	1,4-Benzodiazepines as Substrates	113
1.6.5	1,5-Benzodiazocines as Substrates	116
1.6.6	2,1,4-Benzothiadiazepines as Substrates	117
1.6.7	2,1,3-Benzothiadiazines as Substrates	117
1.6.8	1,3- and 3,1-Benzothiazines as Substrates	117
1.6.9	1,2,4-Benzotriazepines as Substrates	120
1.6.10	1,3,4-Benzotriazepines as Substrates	120
1.6.11	1,2,3-Benzotriazines as Substrates	121
1.6.12	4,1,5-Benzoxadiazocines as Substrates	122
1.6.13	3,2,1-Benzoxathiazines as Substrates	123
1.6.14	1,3-Benzoxazines as Substrates	123
1.6.15	3,1-Benzoxazines as Substrates	124
1.6.16	Cinnolines as Substrates	132
1.6.17	Indazoles as Substrates	133
1.6.18	Indoles as Substrates	134
1.6.19	Isoindoles as Substrates	135
1.6.20	Phthalazines as Substrates	136
1.6.21	Quinolines as Substrates	136
1.7	From a Heterotricyclic Substrate	137
1.7.1	Azirino[2,3- <i>b</i>]indoles as Substrates	137
1.7.2	Benzo[<i>c</i>]cinnolines as Substrates	137
1.7.3	5,8-Epoxyquinazolines as Substrates	138
1.7.4	Imidazo[1,2- <i>c</i>]quinazolines as Substrates	138
1.7.5	[1,2,4]Oxadiazolo[2,3- <i>c</i>]quinazolines as Substrates	139
1.7.6	[1,3]Oxazino- and Oxazolo[2,3- <i>b</i>]quinazolines as Substrates	139
1.7.7	Pyrazolo[1,5- <i>c</i>]quinazolines as Substrates	140
1.7.8	Pyrido[1,2- <i>a</i>]quinazolines as Substrates	140
1.7.9	Pyrido[2,1- <i>b</i>]quinazolines as Substrates	141
1.7.10	Pyrimido[1,6,5- <i>de</i>]-1,2,4-benzothiadiazines as Substrates	141
1.7.11	Pyrrolo[1,2- <i>a</i>]quinazolines as Substrates	142
1.7.12	Pyrrolo[2,1- <i>b</i>]quinazolines as Substrates	142
1.7.13	Tetrazolo[1,5- <i>c</i>]quinazolines as Substrates	142
1.7.14	[1,3,4]Thiadiazino[3,2- <i>c</i>]quinazolin-5-iums as Substrates	143

1.7.15	1,3,4-Thiadiazolo[2,3- <i>b</i>]quinazolines as Substrates	143
1.7.16	1,3,4-Thiadiazolo[3,2- <i>c</i>]quinazolines as Substrates	143
1.7.17	[1,4]Thiazino[3,4- <i>b</i>]quinazolines as Substrates	144
1.7.18	Thiazolo[4,3- <i>b</i>]quinazolines as Substrates	144
1.7.19	Thioxanthenes as Substrates	144

1.10	From a Spiro Heterocyclic Substrate	150
CHAPTER 2.	QUINAZOLINE, ALKYLQUINAZOLINES, AND ARYLQUINAZOLINES	151
2.1	Quinazoline	151
2.1.1	Preparation of Quinazoline	151
2.1.2	Physical Properties of Quinazoline	152
2.1.3	Reactions of Quinazoline	153
2.2	C-Alkyl- and C-Arylquinazolines	158

2.2.1	Preparation of Alkyl- and Arylquinazolines	158
2.1.1.1	By C-Alkylation	158
2.2.1.2	By Displacement Reactions	160
2.2.1.3	By Eliminative Reactions	162
2.2.1.4	By Interconversion of Alkyl Groups	164
2.2.1.5	By Modification of Carbaldehydes or Ketones	167
2.2.1.6	By Rearrangement	167
2.2.1.7	By Oxidation of Hydro Derivatives	168
2.2.2	Properties and Reactions of Alkyl- and Arylquinazolines	169
2.2.2.1	Halogenation at Alkyl Groups	169
2.2.2.2	Oxidation at Alkyl Groups	172
2.2.2.3	Mannich Reactions at Alkyl or Aryl Groups	174
2.2.2.4	Acylation at Alkyl Groups	175
2.2.2.5	Nitrosation at Alkyl Groups	177
2.2.2.6	Other Reactions at Alkyl Groups	177
CHAPTER 3.	HALOGENOQUINAZOLINES	181
3.1	Preparation of 2- or 4-Chloroquinazolines	181
3.1.1	From Quinazolinones with Phosphoryl Chloride	181
3.1.2	From Quinazolinones with Phosphorus Pentachloride	183
3.1.3	From Quinazolinones with a Vilsmeier Reagent	184
3.2	Preparation of 2- or 4-(Bromo, Iodo, or Fluoro) quinazolines	185
3.3	Preparation of 5- to 8-Halogenoquinazolines	186
3.4	Preparation of Extranuclear Halogenoquinazolines	188
3.5	Reactions of 2- or 4-Halogenoquinazolines	191
3.5.1	Aminolysis of 2- or 4-Halogenoquinazolines	191
3.5.1.1	With Simple 2-Halogenoquinazo- lines as Substrates	191
3.5.1.2	With Simple 4-Halogenoquinazo- lines as Substrates	192
3.5.1.3	With 2,4-Dihalogenoquinazolines as Substrates	194

3.5.1.4	With 2-Halogeno-4- or 4-Halogeno-2-quinazolinamines as Substrates	196
3.5.1.5	With Other 2-Halogeno-4- or 4-Halogeno-2-substituted-quinazolines as Substrates	197
3.5.2	Alcoholysis of 2- or 4-Halogenoquinazolines	200
3.5.3	Hydrolysis of 2- or 4-Halogenoquinazolines	203
3.5.4	Thiolysis or Alkanethiolysis of 2- or 4-Halogenoquinazolines	204
3.5.5	Other Reactions of 2- or 4-Halogenoquinazolines	205
3.6	Reactions of 5- to 8-Halogenoquinazolines	207
3.7	Reactions of Extranuclear Halogenoquinazolines	210
CHAPTER 4.	OXYQUINAZOLINES	219
4.1	Tautomeric Quinazolinones	219
4.1.1	Preparation of Tautomeric Quinazolinones	220
4.1.1.1	From Quinazolinamines	220
4.1.1.2	From Quinazolinethiones or Derivatives	221
4.1.1.3	From Alkoxy- or Aryloxy-quinazolines	223
4.1.1.4	From Other Types of Quinazoline Substrates	224
4.1.1.5	By Nuclear Oxidation of Quinazolines or Hydroquinazolines	225
4.1.2	Reactions of Tautomeric Quinazolinones	227
4.1.2.1	Conversion into Quinazolinethiones	227
4.1.2.2	O- or N-Acylation and O-Silylation Reactions	229
4.1.2.3	O- or N-Alkylation Reactions	231
4.1.2.4	Conversion into Quinazolinamines	238
4.1.2.5	Nuclear Reduction with or without Deoxygenation	239
4.1.2.6	Other Reactions	241
4.2	5- to 8-Quinazolinols	242
4.2.1	Preparation of Quinazolinols	242
4.2.2	Reactions of Quinazolinols	245
4.3	Quinazoline Quinones	247
4.4	Extranuclear Hydroxyquinazolines	250

4.4.1	Preparation of Extranuclear Hydroxy-quinazolines	250
4.4.2	Reactions of Extranuclear Hydroxy-quinazolines	253
4.5	Alkoxy- and Aryloxyquinazolines	256
4.5.1	Preparation of Alkoxy- and Aryloxy-quinazolines	256
4.5.2	Reactions of Alkoxy- and Aryloxyquinazolines	258
4.5.2.1	Aminolysis of Alkoxyquinazolines	258
4.5.2.2	Thermal Rearrangement of 2- or 4-Alkoxyquinazolines	260
4.5.2.3	Hilbert–Johnson Reactions on Trialkylsiloxyquinazolines	261
4.6	Nontautomeric (Fixed) Quinazolinones	262
4.6.1	Preparation of Fixed Quinazolinones	262
4.6.2	Reactions of Fixed Quinazolinones	265
4.6.2.1	Conversion into Fixed Quinazolinethiones	265
4.6.2.2	Reductive Reactions	267
4.6.2.3	Other Reactions	269
4.7	Quinazoline <i>N</i> -Oxides	272
4.7.1	Preparation of Quinazoline <i>N</i> -Oxides	272
4.7.2	Reactions of Quinazoline <i>N</i> -Oxides	274
4.7.2.1	Deoxygenation	274
4.7.2.2	<i>O</i> -Acylation or <i>O</i> -Alkylation	276
4.7.2.3	Reactions Involving Ring Scission	278
4.7.2.4	Minor Reactions	279
4.8	Ancillary Aspects of Oxyquinazolines	280

CHAPTER 1

Primary Syntheses

The primary synthesis of quinazolines may be accomplished by cyclization of benzene substrates already bearing appropriate substituents; by treatment of benzene substrates with synthons to provide one or more of the ring atoms required to complete the pyrimidine ring; by analogous processing of preformed pyrimidine substrates; by elaboration from several acyclic synthons; or by rearrangement, ring expansion/contraction, degradation, or modification of appropriate derivatives of other heterocyclic systems. Partially or even fully reduced quinazolines may often be made by rather similar procedures; such cases are usually illustrated toward the end of each subsection. Examples of any pre-1966 syntheses in each category may be found from the cross-references (e.g., *H* 48) to Armarego's parent volume;²⁴¹⁴ some post-1966 material has been reviewed elsewhere in brief.^{409,2382,2383}

1.1. FROM A SINGLE BENZENE SUBSTRATE

A remarkable number of quinazoline syntheses have been carried out by pre-forming appropriate benzene derivatives for cyclization to required quinazolines by the formation of one remaining bond on the pyrimidine side of the molecule.

1.1.1. By Formation of the 1,2-Bond (*H* 11,48,394)

Such a process is typified by the facile conversion of 3-hydroxy-6-nitrobenzaldehyde into 3-(diformamido)methyl-4-nitrophenol (1) with subsequent reductive cyclization (Zn/AcOH) to 6-quinazolinol (2) (57%),²³⁵⁹ representing a classic example of Reidel's synthesis (*H* 48). Rather similar reductive procedures gave 5,6,8-trimethoxy-7-methylquinazoline (48%),²³⁶³ 5,8-dimethoxyquinazoline

(41% or 93%),^{585,1604} and 5,8-dibutoxyquinazoline (79%).⁵⁹⁵ Other reductive processes and several completely different ways to achieve cyclization by 1,2-bond formation are illustrated in the following examples.

Reductive cyclizations

N-Acetyl-2-nitrobenzamide (**3**, R = H) gave 2-methyl-4(3*H*)-quinazolinone 1-oxide or 2-methyl-4(3*H*)-quinazolinone (electrolytic: according to conditions).²³⁹⁹

(3)

N-Acetyl-*N*-methyl-2-nitrobenzamide (**3**, R = Me) gave 2,3-dimethyl-4(3*H*)-quinazolinone [CO, Ru₂(CO)₁₂, dioxane, 10 atm, 140°, 16 h: 93%].²⁴⁰⁶

N-Ethoxycarbonyl-*N*-methyl-2-nitrobenzamide gave 1-hydroxy-3-methyl-2,4(1*H*, 3*H*)-quinazolinedione (NaBH₄, NaOH, H₂O, 20°, 90 min: 24%).⁴²⁵

5-*o*-Aminophenyl-3-phenyl-1,2,4-oxadiazole (**4**) gave 2-phenyl-4(3*H*)-quinazolinone (H₂, Pd/C, EtOH, 1 atm, 20°: 72%).⁹⁹¹

(4)

Also other examples.^{1766,2067}

Thermal cyclizations

2-*p*-Fluorobenzylamino-*N*-(α -methylamino- α -methylthiomethylene)benzamide (**5**) gave 1-*p*-fluorobenzyl-2-methylamino-4(3*H*)-quinoxalinone [(MeOCH₂CH₂)₂O, trace NaOH, reflux, 2 h: 74%].⁹⁰⁶

(5)
