# Table of Contents

[Enterprise Application Development with Ext JS and Spring Credits](#)

[About the Author](#)

[Acknowledgments](#)

[About the Reviewers](#)

[www.PacktPub.com](#)

[Support files, eBooks, discount offers and more](#)

[Why Subscribe?](#)

[Free Access for Packt account holders](#)

[Preface](#)

[What the book covers](#)

[What you need for this book](#)

[Who this book is for](#)

[Application architects](#)

[Java developers](#)

[Ext JS developers](#)

[Conventions](#)

[Reader feedback](#)

[Customer support](#)

[Downloading the example code](#)

[Errata](#)

[Piracy](#)

[Questions](#)

[1. Preparing Your Development Environment](#)

[Installing MySQL](#)

[Installing the Java SE Development Kit \(JDK\)](#)

[Installing the NetBeans IDE](#)

[Introducing Maven](#)

[Creating the Maven Web Application project](#)

[Understanding the POM and dependency management](#)

[Understanding dependency scope](#)

[Defining Maven properties](#)

[Understanding Maven-build plugins](#)

[Executing the Maven build](#)

[Starting the GlassFish 4 server](#)

[Running the Task Time Tracker project](#)

[Summary](#)

[2. The Task Time Tracker Database](#)

[Connecting NetBeans with MySQL](#)

[The 3T database](#)

[The company table](#)

[The projects table](#)

- [The tasks table](#)
- [The user table](#)
- [The task log table](#)
- [Enterprise options for the 3T database](#)
  - [Password encryption](#)
  - [LDAP integration](#)
  - [Audit trails](#)
    - [Logon activity audits](#)
    - [Custom audit tables](#)
- [Summary](#)
- [3. Reverse Engineering the Domain Layer with JPA](#)
  - [Understanding the reasons for using JPA](#)
  - [Understanding JPA implementations](#)
  - [Reverse engineering with NetBeans](#)
  - [Introducing the persistence.xml file](#)
  - [Refactoring the Java classes](#)
    - [The Company.java file](#)
      - [The @Entity annotation](#)
      - [The @Table annotation](#)
      - [The @Id annotation](#)
      - [The @GeneratedValue annotation](#)
      - [The @Basic annotation](#)
      - [The @Column annotation](#)
      - [The @NotNull and @Size annotations](#)
      - [The @OneToMany annotation](#)
      - [The @NamedQueries annotation](#)
    - [The Projects.java file](#)
      - [The @ManyToOne annotation](#)
    - [Bidirectional mapping and owning entities](#)
    - [The Task.java file](#)
    - [The User.java file](#)
    - [The TaskLog.java file](#)
  - [Introducing the Java Persistence Query Language](#)
    - [Defining named queries](#)
  - [Refactoring Java equals\(\) and hashCode\(\)](#)
  - [Summary](#)
- [4. Data Access Made Easy](#)
  - [Defining the DAO interfaces](#)
    - [Adding the CompanyDao interface](#)
    - [Adding the ProjectDao interface](#)
    - [Defining a generic DAO interface](#)
    - [The TaskDao interface](#)
    - [The UserDao interface](#)
    - [The TaskLogDao interface](#)
  - [Defining the generic DAO implementation](#)
    - [The Simple Logging Facade for Java](#)

- [The @PersistenceContext\(unitName = "tttPU"\) line](#)
- [The @Transactional annotation](#)
  - [The Propagation.REQUIRED property](#)
  - [The Propagation.SUPPORTS property](#)
  - [The readOnly property](#)
  - [Other transaction properties](#)
- [Defining the DAO implementations](#)
  - [The CompanyDaoImpl class](#)
  - [The ProjectDaoImpl class](#)
  - [The TaskDaoImpl class](#)
  - [The UserDaoImpl class](#)
  - [The TaskLogDaoImpl class](#)
- [A better domain layer](#)
- [Exercise – a simple change request](#)
- [Summary](#)
- [5. Testing the DAO Layer with Spring and JUnit](#)
  - [Unit testing overview](#)
    - [The benefits of unit testing](#)
  - [Configuring the test environment](#)
    - [The jdbc.properties file](#)
    - [The logback.xml file](#)
    - [The test-persistence.xml file](#)
  - [Introducing the Spring IoC container](#)
    - [Exploring the testingContext.xml file](#)
      - [The Spring XML namespaces](#)
      - [The property file configuration](#)
      - [Creating the JDBC DataSource](#)
      - [Defining helper beans](#)
      - [Defining the EntityManagerFactory class](#)
      - [Configuring the transaction manager](#)
      - [Autowiring beans](#)
      - [Thanks for the plumbing!](#)
    - [Enabling the Maven environment for testing](#)
  - [Defining a test case superclass](#)
  - [Defining the CompanyDao test case](#)
  - [Running the JUnit test cases with Maven](#)
    - [Running the CompanyDaoTest.java file](#)
    - [The results for the CompanyDaoTests.testMerge test case](#)
    - [The results for the CompanyDaoTests.testFindAll test case](#)
    - [The results for the CompanyDaoTests.testFind test case](#)
    - [Results for the CompanyDaoTests.testPersist test case](#)
    - [Results for the CompanyDaoTests.testRemove test case](#)
  - [JPA traps for the unwary](#)
  - [Exercises](#)
  - [Summary](#)
- [6. Back to Business – The Service Layer](#)

[Service layer considerations](#)

[Building the service layer](#)

[The Result Data Transfer Object](#)

[The AbstractService.java class](#)

[The service layer interfaces](#)

[Implementing the service layer](#)

[Authentication, authorization, and security](#)

[The CompanyService implementation](#)

[The TaskService implementation](#)

[The TaskLogService implementation](#)

[Testing the service layer](#)

[Automating the service layer tests](#)

[Exercises](#)

[Summary](#)

## [7. The Web Request Handling Layer](#)

[A brief history of Web MVC](#)

[Request handling for enterprise web applications](#)

[Building the request handling layer](#)

[Preparing for JSON generation](#)

[Implementing the Company addJson method](#)

[Implementing the Project addJson method](#)

[Implementing the Task addJson method](#)

[Implementing the User addJson method](#)

[Implementing the TaskLog addJson method](#)

[A note on JSON](#)

[Creating the request handlers](#)

[Defining the AbstractHandler superclass](#)

[Defining the SecurityHandler class](#)

[The @Controller and @RequestMapping annotations](#)

[The @ResponseBody annotation](#)

[The @RequestParam annotation](#)

[Authenticating a user](#)

[Logging out](#)

[Defining the CompanyHandler class](#)

[Defining the ProjectHandler class](#)

[The Spring HandlerInterceptor interface](#)

[The Spring MVC configuration](#)

[Defining the TaskLogHandler class](#)

[The @InitBinder annotation](#)

[More on Spring MVC](#)

[Exercises](#)

[Summary](#)

## [8. Running 3T on GlassFish](#)

[Configuring the 3T web application](#)

[The Spring applicationContext.xml file](#)

[The web.xml file](#)

- [The glassfish-web.xml file](#)
- [Configuring the Maven pom.xml file](#)
- [Adding eclipselink.target-server to the persistence.xml file](#)
- [Adding the logback.xml file to your resources directory](#)
- [Configuring the GlassFish server](#)
  - [Renaming the setup directory](#)
  - [Starting the GlassFish server in NetBeans](#)
  - [Configuring the JDBC connection pool](#)
  - [Configuring the JDBC resource](#)
- [Running 3T](#)
- [Managing GlassFish without NetBeans](#)
- [Summary](#)
- [9. Getting Started with Ext JS 4](#)
  - [The importance of application design](#)
  - [Ext JS 4 MVC concepts](#)
    - [Model](#)
    - [View](#)
    - [Controller](#)
    - [Ext JS 4 flexibility](#)
  - [Ext JS 4 design conventions and concepts](#)
  - [Practical conventions](#)
    - [Project structure](#)
    - [Naming conventions](#)
      - [Naming stores and models](#)
      - [Naming views](#)
      - [Naming controllers](#)
      - [Naming xtypes](#)
  - [The Ext JS 4 development environment](#)
    - [Installing Sencha Cmd](#)
    - [Installing Ext JS 4 SDK](#)
  - [Generating the 3T Ext JS 4 application skeleton](#)
    - [The index.html file](#)
    - [The app.js and Application.js files](#)
    - [The bootstrap.js and bootstrap.css files](#)
    - [The app/Viewport.js and app/view/Main.js files](#)
    - [The app/controller/Main.js file](#)
  - [Creating components using Sencha Cmd](#)
    - [Generating model skeletons](#)
    - [Generating views and controllers using Sencha Cmd](#)
  - [Summary](#)
- [10. Logging On and Maintaining Users](#)
  - [Layouts, screens, and workflows](#)
    - [Defining view components](#)
  - [Building our views](#)
    - [Defining the Logon window](#)
    - [Using the initComponents\(\) function](#)

- [Defining the viewport](#)
  - [The MainHeader.js view](#)
  - [The MainCards.js file](#)
- [Defining the Welcome panel](#)
- [Defining the user management components](#)
  - [The ManageUsers.js file](#)
  - [The UserForm.js file](#)
  - [The UserList.js file](#)
  - [The User store](#)
- [Models and persistence](#)
  - [Defining the proxy](#)
  - [Comparing AJAX and REST proxies](#)
  - [Defining the reader](#)
  - [Defining the writer](#)
  - [Defining validations](#)
- [Controlling the Logon and Viewport actions](#)
  - [The MainController.js file](#)
- [Controlling our user views](#)
  - [The doAddUser function](#)
  - [The doSelectUser function](#)
  - [The doSaveUser function](#)
  - [The doDeleteUser function](#)
- [Let's log on!](#)
- [Let's maintain users](#)
- [Summary](#)
- [11. Building the Task Log User Interface](#)
  - [Task log workflows and layouts](#)
  - [Building our task log views](#)
    - [The ManageTaskLogs.js file](#)
    - [The TaskLogForm.js file](#)
    - [The TaskLogList.js file](#)
  - [Defining our models](#)
    - [The TaskLog Model](#)
    - [The Project model](#)
    - [The Task Model](#)
  - [Defining our stores](#)
    - [The TaskLog store](#)
    - [The Project store](#)
    - [The Task store](#)
  - [Controlling the TaskLog actions](#)
  - [Testing the task log interface](#)
  - [Summary](#)
- [12. 3T Administration Made Easy](#)
  - [Administration workflows and layouts](#)
  - [Building the 3T administration interface](#)
    - [The ManageTasks.js file](#)

- [The CompanyForm.js file](#)
- [The ProjectForm.js file](#)
- [The TaskForm.js file](#)
- [The CompanyTree.js file](#)
- [Introducing the Ext.data.TreeStore class](#)
- [Generating a JSON tree in the CompanyHandler class](#)
- [The CompanyHandler.getTreeNodeId\(\) method](#)
- [The CompanyHandler.getCompanyTreeJson\(\) method](#)
- [Controlling the 3T administration](#)
  - [Defining the Company model and store](#)
  - [The doAfterActivate function](#)
  - [The doSelectTreeItem function](#)
  - [The doSave functions](#)
  - [The doDelete functions](#)
  - [The doAdd functions](#)
- [Testing the 3T administration interface](#)
- [Dynamically loading tree nodes](#)
- [Displaying multiple tree columns](#)
- [Drag-and-drop made easy](#)
- [Summary](#)
- [13. Moving Your Application to Production](#)
  - [Compiling with Sencha Cmd](#)
  - [Ext JS 4 theming](#)
  - [Compiling for production use](#)
  - [Integrating Sencha Cmd compiling with Maven](#)
  - [Adding the build version and timestamp](#)
  - [Building a slimmer WAR file](#)
  - [Deploying the WAR file to GlassFish](#)
    - [Opening the GlassFish admin console](#)
    - [GlassFish security basics](#)
    - [Deploying the WAR file using the admin console](#)
    - [Deploying the WAR file using asadmin](#)
    - [Further deployment information and reading](#)
  - [GlassFish performance tuning and optimization](#)
  - [Summary](#)
- [A. Introducing Spring Data JPA](#)
- [Index](#)
